High - Lab Experiments

90

Experiment - 1

Aim:

To create a simple cloud-based hospital information system using Zoho to demonstrate SaaS.

Procedure:

1. Open Zoho Creator and create a new application
2. Create a patient information form with required fields.
3. Enter patient information from with required fields.
4. Submit and store the details in the cloud.
5. Create a report to display the submitted information
6. Verify the stored patient details.

Patient Information Form	
Name	Email
Address	Phone
Single Line	Multi Line
1 2 3 Number	Date
Times	Drop down

Patient Name:	Sweta	Attender name:	Priya
Age :	23	Attender phone:	786346210
Address :	Chennai	Doctor name:	Dr. Revu
Phone :	8616432104	Diseases :	Fever
Email :	sweta@gmail.com		

Output:

Patient Information Details:

Patient name	Age	Address	phone	Email	Attender name	Attender phone	Doctor name	
R. Suresh	23	Chennai	9610717112	ankita@gmail.com	Priya	9843211237	Dr. Ravi	Dr.

+ Add Patient

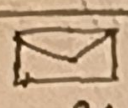

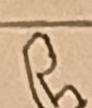

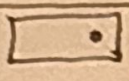

EXPERIMENT-2 ONLINE SUPERMARKET USING Zoho

Aim:

To create a simple cloud-based online supermarket application using Zoho to demonstrate SaaS.

Procedure:

1. Open Zoho Creator and create a new application
2. Create a customer form with required fields
3. Add fields for customer details, items and quantity.
4. Create an item classification form
5. Enter and submit the customer and item details.
6. Create a report to display the submitted information
7. Verify the stored details in the Zoho application.

 Name	 Email
 Address	 Phone
 Single line	 Multi line
1 2 3 Numbers	 Date
 Times	 Drop down

Customer Order Form:

Customer details

Customer Name:

Email:

Address:

Order date:

Phone:

Order details

Item classification:

Item name:

Quantity:

Output:

Customer Order Details:

Name	Address	Phone	Email	Order date	Item class	Item name	Quantity
Sweeta	chemai	98610432	Sweeta@gmail.com	20-05-26	Groceries	Rice(2kg)	4

EXPERIMENT - 3 VIRTUALIZATION USING VMWARE

Aim:

To demonstrate virtualization by installing a Type-2 Hypervisor and creating a virtual machine VMWare

Procedure:

1. Install VMWare Workstation on the host system
2. Create a new virtual machine and select the required OS
3. Allocate 3 CPUs, 10 GB RAM and 10 GB storage

4. configure the VMware settings and install the operating system

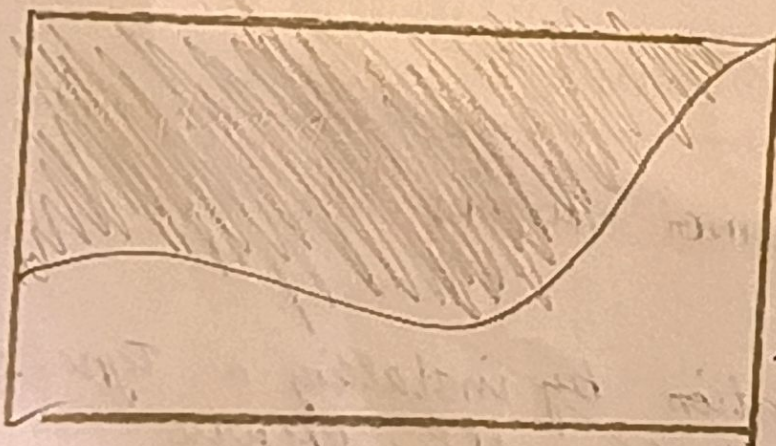

5. start the virtual machine and verify its operation.

Implementation

Output:

Memory	10GB
Processor	3
Hard Disk (SCSI)	10 GB
CD/DVD (SATA)	Using file
Network Adaptor	NAT
USB Controller	Present
Display	Auto detect.

Output:

EXPERIMENT - A - SNAPSHOT AND CLONED VM USING VMWARE

Aim:

To create a snapshot of a virtual machine using VMware and verify the previous version by restoring the snapshot or cloning the VM.

Procedure:

1. Open the virtual machine in VMware
2. Create a snapshot of the running VM
3. Restore the previously created snapshot
4. Verify the VM returns to its previous state
5. Clone the VM and verify that the cloned VM works successfully.

Implementation:

RAM Memory
Processor
Hard Disk

Output

The VM snapshot was created successfully.
